The Future of Plastics

Posted by [sat](#) on Thu, 2015-07-09 10:33

This online resource looks at plastics and their future use in Australia.

The resource provides information on the current status and future use of plastics and examines the need for a new source of plastics that reduces the pressure on demand for fossil fuels in their production and the impact of this use of fossil fuels on the environment.

A new range of plastics known as bioplastics are introduced and detailed information about their origins and their differing abilities to decompose safely in the environment is provided.

The resource provides links to graphical data on the use of plastics and the increasing market demand for bioplastics.

Australian Curriculum v9 Codes: AC9S8U07 (Year 8), AC9S10U07 (Year 10)
