Climate Science: What You Need to Know

Posted by [sat](#) on Tue, 2015-07-14 07:36

This online resource deals with the effects of climate change.

The video examines the science of climate change and summarises the evidence that climate change is happening and that human activities are driving climate change. It also debunks arguments used by climate change skeptics and provides clear scientific explanations to refute those arguments.

The video begins with the basics of the greenhouse effect and the role of increased greenhouse gases in global warming. Observable impacts of climate change are discussed with simple scientific explanations for the impacts and their causes. Evidence that human activities is responsible for these impacts is examined and explained.

Australian Curriculum v9 Codes: AC9S10U04 (Year 10)
