## Wildlife camera

Posted by Anonymous on Thu, 2016-03-31 12:27

Wildlife Camera in School: We are considering using a wildlife camera that senses movement and then records a few minutes of video footage. It would be placed in a treed area on the school grounds overnight. Our aim is to capture footage of nocturnal animals for our ecology topics. Are there any regulations or restrictions that we should be aware of?

### Australian Curriculum:

Living things live in different places where their needs are met

Living things depend on each other and the environment to survive

Interactions between organisms, including the effects of human activities, can be represented by food chains and food webs

Ecosystems consist of communities of interdependent organisms and abiotic components of the environment; matter and energy flow through these systems
