Cool it! Year 3 Sample Assessment

Posted by [sat](#) on Sat, 2016-04-09 10:25

This online resource deals with thermal insulation.

The resource is a sample assessment from the QCAA that studies the insulating properties of different materials.

Students conduct an investigation into the insulating properties of different materials to determine which material can prevent ice from melting the longest.

It includes detailed background information about the science concepts, student worksheet, model of task-specific standards for A-E assessment, suggestions for student feedback, and links to the Australian Curriculum.
