Disposable nitrile gloves

Submitted by sat on 16 February 2018

Answer reviewed 28th January 2023

The chemical resistance of disposable gloves depends upon the chemical and its concentration. Refer to information contained in the SDS under Section 8: Exposure controls and personal protection, where information on hand protection and other exposure controls for handling the chemical is discussed. Gloves with a longer cuff, specifically for handling

concentrated chemicals, are available.

Information on glove selection can also be found in the Science ASSIST Chemical Management Handbook for Australian Schools - Edition 3¹

- page ii has some general information under “Glove selection”
- page vii there are some links to Glove selection guides
- on each chemical summary page under Safe Handling there are recommendations for the type of glove that should be used for each chemical.
