Build an Atom

Posted by [Anonymous](#) on Tue, 2014-04-08 16:52

This online resource explores the structure of an atom.

The resource allows students to build an atom by dragging protons, electrons and neutrons to appropriate places on screen.

Students are advised if the atom they create is neutral, an ion or unstable. There is also an opportunity for students to complete a game version of this activity.

The active component of this resource can be downloaded or embedded into a web page.

Australian Curriculum v9 Codes: AC9S9U06 (Year 9)
