Day and night sky

Posted by [sat](#) on Sat, 2014-04-26 15:25

This online resource identifies the features of the day and night sky.

The resource is a Scootle interactive where students can identify the features of the day and night sky through seeing representations of them on the screen.

This activity could be used to lead a discussion (e.g. Why stars can only be seen at night, whereas the Moon can be seen in the day and the night).
