## Investigating Eggs in Stories and Science

Posted by [sat](#) on Thu, 2014-05-15 17:11

This unit of work explores the life cycles of egg-laying animals.

It is constructed of 12 learning sequences which vary in duration. They include hatching chickens, the life cycle of a chicken, writing an information report, and a literature study.

Each sequence offers practical advice, probing questions and other teaching and learning experiences.

There are two assessment tasks. The first involves an information report on an egg-laying animal and the second, a character profile.

It would support a teacher planning for either English or Science.

New Australian Curriculum Codes: AC9S1U01 (Year 1), AC9S3U01 (Year 3)
