## **Risk Assessment for School Science Activities**

Name and nature of activity	Diluting concentrated acetic acid				
Location and date of activity					
Name of teacher/technician	Science ASSIST example risk assessment				
Activity type	☑Technician procedure ☐Teacher demonstration ☐Student activity – Student year group				
Physics and general equipment	Type of hazard Controls and other measures			measures	
Magnetic stirrer (optional) Glassware	☐ Radiation ionising ☐ Electrical ☐ Thermal ☐ Projectiles ☐ Sharps ☐ Other —	Thermal Projectiles Sharps		<ul> <li>Relevant signage</li> <li>Perspex safety shield</li> <li>Sharps container</li> <li>Glassware free from cracks or chips</li> <li>Safety glasses</li> <li>Thermally insulated gloves</li> <li>Other −</li> </ul>	
Chemicals used and produced	Type of hazard	pe of hazard		Controls and other measures	
Acetic acid, concentrated Acetic acid, dilute solution	Explosive  Flammable  Oxidising  Gases under pressure  Corrosive	Acute toxicity  I Health hazards  Chronic health hazards  Environmental  Other –	□ Limit quantity/concer     □ Perspex safety shield     □ Ventilation: natural/e.     □ Fume cupboard     □ Safety glasses     □ Laboratory coat/apro     □ Gloves: latex/nitrile/n     □ Safety shower     □ Other — Gloves: But excellent protection; nitr latex gloves provide splates available.	d xhaust in leoprene/PVC yl-rubber gloves give lile, neoprene/latex and lash protection.	
Biological/geological materials used	Type of hazard		Controls and other measures		
NA .	☐ Biohazard ☐ Dust/aerosols ☐ Sharps ☐ Manual handling ☐ Other —	Dust/aerosols Sharps Manual handling		☐ Steriliser ☐ Disinfectant ☐ Sharps container ☐ Dust mask ☐ Safety glasses ☐ Gloves ☐ Other —	
Waste produced	Waste disposal proce	aste disposal procedure			
Unused concentrated acetic acid Residual concentrated acid on glassware	<ul> <li>☑ Pre-treatment of waste – If small quantity, neutralise first</li> <li>☑ Sink with water – If small quantity, and after neutralisation</li> <li>☐ Regular waste –</li> <li>☑ Licenced hazardous waste company – if large quantity</li> <li>☑ Other – Unused concentrated acid may be transferred to a suitable labelled container and stored for future use. Rinse contaminated glassware in fume cupboard before removal.</li> </ul>				
Standard Operating Procedures					
<ul> <li>I have read the relevant Standard Operating Procedure.</li> <li>I am experienced/trained in using all the equipment listed.</li> <li>All chemicals used and produced are approved for use.</li> <li>I have read the current SDSs for all hazardous chemicals used and produced.</li> <li>I am aware of safety guidelines for using all chemicals, materials and equipment.</li> <li>I will follow local guidelines for waste disposal (water authority, local council, EPA).</li> <li>I am aware of first aid procedures if required.</li> </ul>					
Other comments: If storing the unused concentrated acid, it is best transferred to a separate container to avoid contamination of the stock bottle.					
Conclusion:  ☐ Risks not significant now and not likely to increase. ☐ Risks significant but effectively controlled at the moment. ☐ Risks significant and not adequately controlled at the moment. ☐ Uncertain about risks; more detailed assessment required.					
Assessment carried out by: Science ASSIST	Signature:			Date: <b>May 2016</b>	
Assessment approved by: Signature:			Date:		
Next assessment due:					

This Risk Assessment assumes that the activity will be conducted in a science teaching area with the following facilities: electricity, running water, emergency shut-offs for electricity, gas if applicable, and water, regular testing and tagging of portable appliances; emergency contingencies such as evacuation/emergency plans, appropriate fire extinguishers, spill kits, hand washing facilities, eyewash/safety shower and first aid supplies. It is also assumed that all the necessary licencing requirements and approvals are obtained prior to the activity.
